

11 March 2026

Annual Price Notification for Disposal of Industrial Liquid Waste via Road Tanker into Bran Sands 2026 to 2027

Dear Sir/Madam,

As a valued customer we are writing to make you aware of some important information about our charges. Please be advised that the treatment of industrial waste delivered to Bran Sands by road tanker shall change with effect from the 1 May 2026.

At Bran Sands we use a two part tariff, comprising of a fixed reception charge and a biological treatment charge based upon the sampled and measured Chemical Oxygen Demand (COD).

The COD charge is based upon sample analysis of COD per individual tanker consignment and calculated to give a mass COD load. A slight variation between consignments is to be expected.

The COD treatment charge shall be £0.70 per 1000 mg/l COD. This means that a mass COD tonne load is only £695.50 off loaded.

There shall still be a single fixed reception charge regardless of being Non hazardous or Hazardous:

- Single Reception Charge £9.23 per tonne off loaded
- At Bran Sands we offer a fixed price of only £6.58 per tonne offloaded on all high volume and low COD bearing wastes that are equal to or less than 5000mg/l COD

These prices are valid until the end of **March 2027**.

All invoice queries are to be raised by you within 14 days of receipt, otherwise invoice shall be paid in full as stipulated within 30 days.
